

## Mouse pad quality test

### Our quality in detail

- 1 *Transparent foil with special surface for optical mice*
- 2 *Printing colour on foil underside is covered by opaque white layer*
- 3 *Opaque white layer*
- 4 *Anti-slip coating*

## Do the quality test yourself!

With simple means you can tell the difference between our quality mousepads and cheap products:

### Do the scratch test

**Scratch vigorously on the back with your fingernail –**  
*it's bad if you can scratch the non-slip coating...*

### Do the water test

**Immerse the mousepad completely in water for a few minutes, then look at the edges –**  
*it's bad if they swell or individual layers come loose...*
