Waste bin stickers for waste management

Waste stickers of all kinds

*Waste bin stickers,
waste stamps, waste banderoles,
information stickers,...*

- High-quality branded self-adhesive foils
- Highly lightfast UV colours
- Weatherproof, waterproof, scratch-resistant
- Extensive product range
- Easy application of the stickers
- Security punching to prevent misuse
- Options: numbered, coded, etc.

TOP quality
weatherproof + lightfast
waste stickers

Waste bin stickers for waste management

Waste stickers should be practical and effective for regular waste disposal.

The most important thing is that waste management works smoothly with the help of the waste stickers.

Waste stickers from the manufacturer

Top-quality waste stickers direct from the manufacturer

We have been producing hundreds of thousands of waste stickers every year for around 25 years. Our customised, systematically structured **modular principle** of sizes, shapes and designs enables detailed adaptation to the individual requirements of each customer – without unnecessary additional costs.

The **waste stickers** are characterised by these **properties**, among others:

- Highly lightfast UV colours (approx. 3 years outdoors)
- High-quality brand foils with reliable adhesive properties
- Simple application of the waste tags in practice
- Protection against misuse thanks to security punching

Extensive product range

Our extensive product range

Many products in our product range are **in-house developments** that have already proven themselves millions of times in practice.

- **Waste sticker systems** with security punching, control number and verification for affixing to notices – also for organic, seasonal or special stamps.
- **Waste banderoles systems** with security punching – also with copy protection and control tear-off.
- **Information stickers** of all kinds for labelling waste bins, rubbish bins and containers – e.g. organic waste bins, waste paper, yellow bins, recyclables, etc.

We design charge/control labels for waste bins according to your requirements and wishes. Use our range as a helpful basis for this.

Waste stamps with a system

Waste stamps with a system

Waste stamps are not standard printed matter like letterheads or flyers. The requirements are much higher: years of outdoor durability, **easy handling** and a **high level of functional reliability** are decisive features. In addition, high-quality adhesive foils and lightfast colours as well as many years of experience in production are decisive advantages.

UV offset printing

UV offset printing with all the possibilities

We have professional Heidelberg UV offset printing machines with 5 UV printing units, UV coating unit and inline die-cutting unit for the high-quality printing of all types of waste stickers on self-adhesive foil. This allows us to combine high quality and many variation options with effective production in a short time.

Waste stickers of all kinds

Waste stickers of all kinds

- **Annual stamps** or seasonal stamps (also with proof)
- **Waste banderoles/control strips** for one-off emptying
- Security bin liners with special **copy protection**
- **Waste tokens** with control tear-off
- **Special stamps** for containers, refrigerators or yellow bags
- **Labelling stickers** for all types of waste bins
- Waste bin stickers with **instructions** for filling etc.

Expert advice

Expert advice – right from the start

In the run-up to your tender, we will explain to you the technical options with which your requirements can best be realised. This gives you the **certainty** that everything will work smoothly in day-to-day practice all year round. Municipal authorities and waste management companies value this **expert advice**, our in-depth knowledge and many years of practical experience.

Applications

- Annual stickers
- Container stickers
- Control strips
- Fee stamps
- Information stickers
- Labelling stickers
- Logo stickers
- Safety banderoles
- Seasonal stickers
- Security stickers
- Special stamps
- Tokens
- Waste banderoles
- Waste bin stickers

Residual waste stamp with proof

Important functional features of our waste stamps

An ingenious **1 safety punching** prevents the unauthorised removal of affixed stamps. The practical **2 user tabs** spring open by simply bending over at the punching line so that the stamps can be easily removed. A short **3 instruction text** on this section contains all the important information about the correct application of the stamp. The **4 die-cut on the back** (optional) is used to stick the stamp to the notification – the section with the proof remains stuck to the notification and can be used as proof of receipt of the stamp. With identical **5 control numbers** (optional) on the stamp and proof, each stamp can be clearly assigned to the corresponding proof or notification – effective protection against misuse.

Waste bin stickers for waste management

What you should know...

Foil material and adhesives

A permanent adhesive should ensure permanent adhesion to the waste bin – and also withstand all weather conditions. The decisive factor in **choosing the right adhesive** is the nature of the surfaces to be bonded (roughness, apolarity) and the type of materials to be bonded (plastics, metals), as not every adhesive adheres equally well to every substrate.

The **durability of the foil** is not only determined by the weather and UV stability of the foil used, but also by the ageing resistance of the adhesive, the adhesion of the printing ink, the shrinkage behaviour of the foil, etc. We have selected various **foil/adhesive combinations** from the wide range of options in order to be able to specifically cover the different requirements. This is backed up by around 25 years of experience with hundreds of thousands of waste stamps every year in all parts of Germany.

Protection through UV coating (optional)

A full-surface **UV coating** protects the print and foil from the effects of the weather. This smooth, silicone-containing lacquer surface is **dirt-repellent** and also acts as protection against cleaning agents. The surface is also better protected against scratches and mechanical stress. In practice, a UV coating can be expected to last for approx. 3 years.

Colours with maximum light fastness (standard)

The most important durability criterion is the **lightfastness** of the printing inks used. This is categorised in levels from 1-8, with "1" standing for the lowest and "8" for the highest lightfastness. We only use colours with the highest light fastness, i.e. black and blue tones with "WS 8" and red and yellow tones with at least "WS 7". In practice, this guarantees a durability of 1-2 years even without varnishing.

The spot colours shown here may differ slightly in colour from the original spot colours used in UV offset printing.
